

# Raspberry Pi

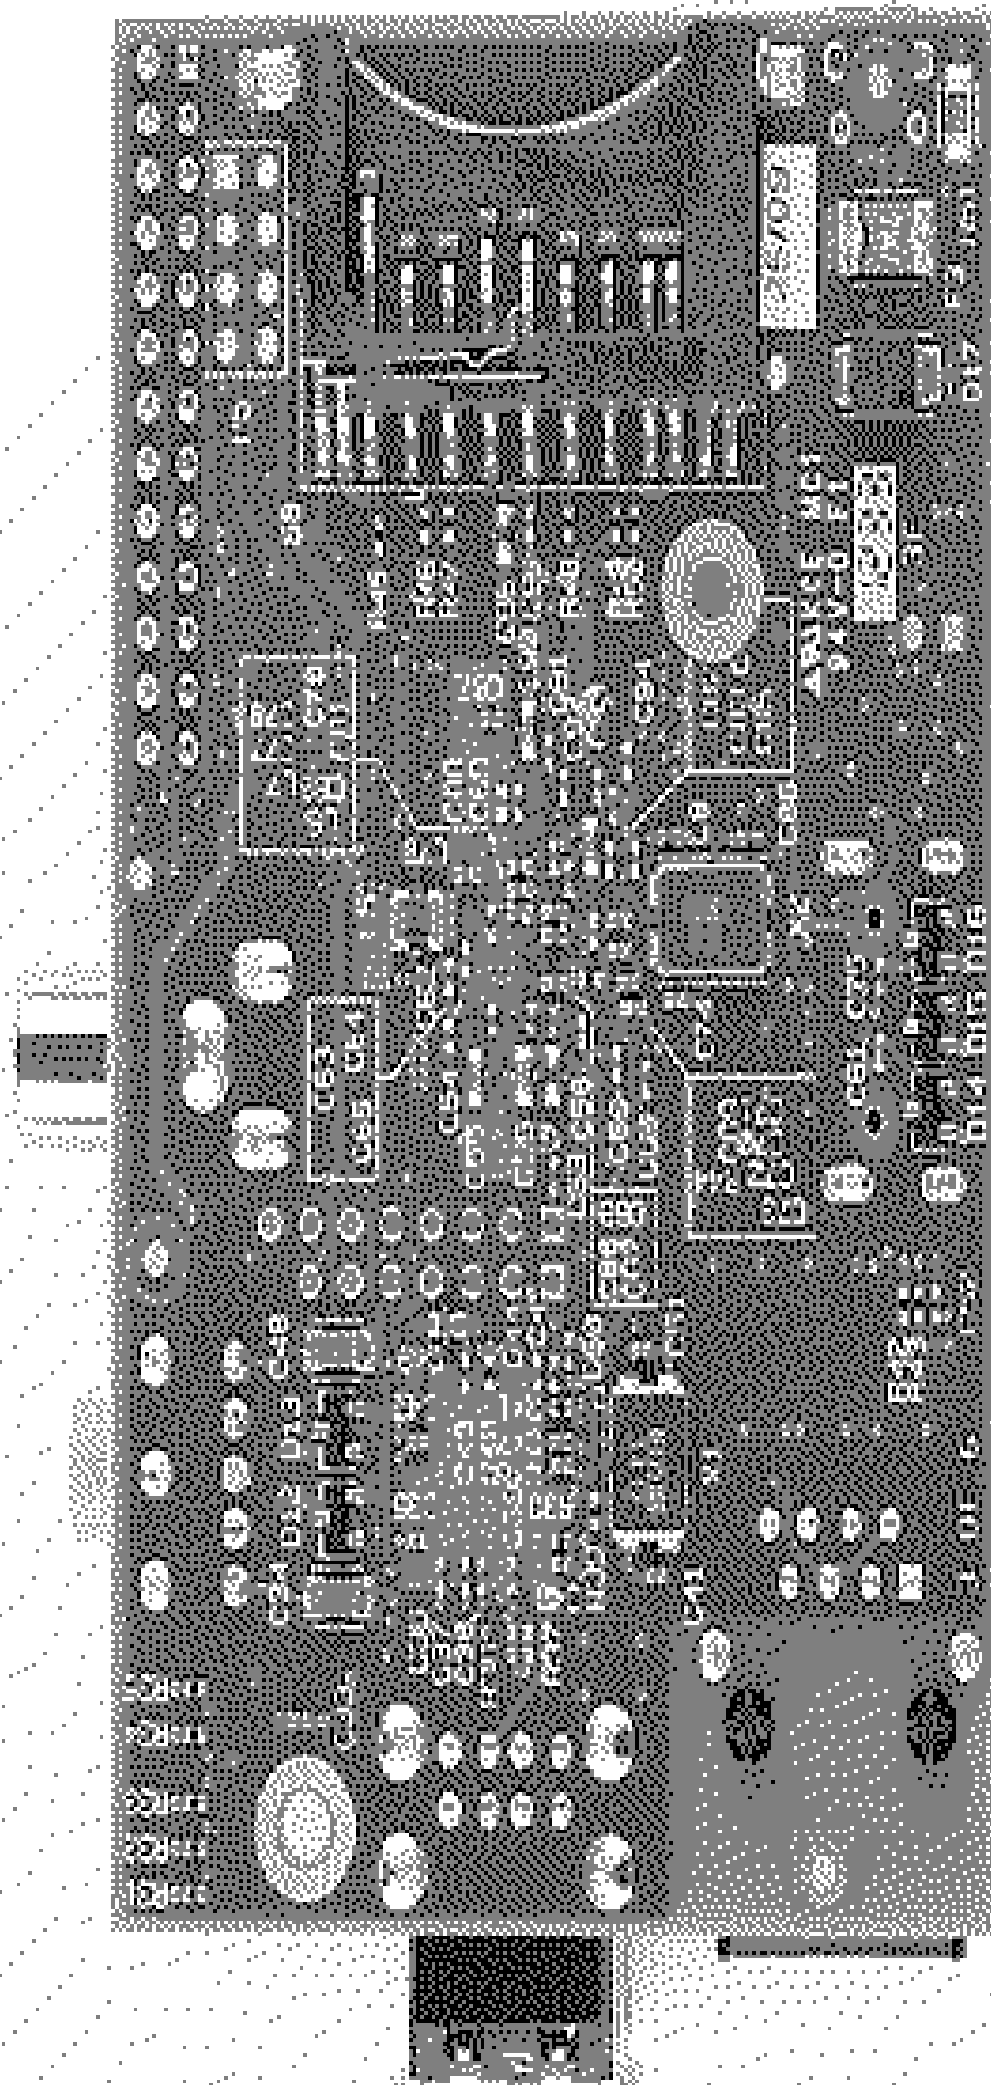

Released in February 2012, the Raspberry Pi Model B was the credit card-sized computer that started it all.

- \* Find a Raspberry Pi**
- \* Get an SD card**
- \* Use the Raspberry Pi Imager App to flash the operating system**
- \* Install Apache2, PHP**
- \* Clone the repository from GitHub into the /var/www/html folder**
- \* Put your server online by connecting it to your router**
